Climate Change: Benefits of Dams & Reservoirs

By Robert May

The authors of climate change. As there is scientific consensus on the reality of climate change, it is important to identify and evaluate options aimed at reducing greenhouse gas emissions. As a result of the scientific consensus, the United Nations Framework Convention on Climate Change (UNFCCC) was established in 1992. The Kyoto Protocol, the first legally binding agreement, was adopted in 2005. The Paris Agreement, the most recent, was adopted in 2015. The Paris Agreement is a landmark agreement in climate change mitigation, adaptation, and loss and damage, and financing, and it sets the stage for a new era of climate change action.
