Climate Change: Benefits of Dams & Reservoirs

By Robert May

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

ICOLD President's Message

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

ICOLD Secretary's Message

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

ICOLD Vice President's Message

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

ICOLD Treasurer's Message

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

Energy Storage and Reservoirs

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

Water for the World

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

ICOLD Activities

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.

ICOLD 2017 Conference

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industry. They also provide flood control, recreation, and hydroelectric power. But what about their role in addressing climate change? This issue of the newsletter explores the ways in which dams and reservoirs can help us adapt to a changing climate and reduce our carbon footprint.
