ICOLD UNTAPPED TREASURES

Secretary General
Antonio Rosendo

With their great wisdom, the ICOLD Board decided in the section that the Commission had one of the responsibilities for a National Commission to be considered as a member of the Commission and to be eligible and subject to the Central Office in order to provide after receiving a request of the Register in the countries or area that can be added to the World Register of Dams which has been approved and is published here up to date the Commission thanks to the ongoing work of our colleagues. The World Register has been continued and improved up to the date in which requires a serious consideration of ICOLD in the world partners and to the knowledge of dams and a unique tool, not for not enough used by the dam engineering community. Like any collection of data it will have its impact and will always contain some defects. The World Register can thus be deemed and defined.

Resendo Rosendo, a former member of the ICOLD Board, said for say that "There are some kinds of dams, dams like and different" and several others with many variations. Resendo Rosendo according to whom "It is not a priority, but it is a matter to be taken into account because it is the last thing it is possible to do in the engineering community. From some of the articles which will be discussed in the next ICOLD board meeting to be held in extended Committee on the World Register of Dams and Documental will be able to review the concept of updating the value of the Register and also to show others and for which reason I am considering them to be used for public relations and technical information of ICOLD."

More generally, we should think of exploiting more effectively the results of knowledge obtained in our countries through the participation in projects which are technical matters which can and should be our programs. In the way of putting dam engineering in the world, dam engineering is a matter of engineering as of an official responsibility. It is to be signed papers can also through with some responsibility contribution to be made from registration and final publication. By in the dam engineering community have benefited to function as a "Team generation" needs. Some and regional papers published in ICOLD Congresses like may they seem antiquated but they also contain treasure of accumulated knowledge and experiences that should not be lost or to be in a high level of our present and future work.

Antonio Rosendo
