### WORD FROM THE PRESIDENT

**D**espite our reputation, although generally not adequately knowledgeable of the practical aspects that affect the modern world of energy engineering conditions, the time has come when the ICOLD and other Associations have to consider the challenges and the importance of the ICOLD spirit. The recognition must be an effort of increasing the working and support of activity as a whole, and it is independent of time. These things should be done in order to improve the situation of ICOLD, increasing the production, increasing the production, producing electric power, and producing energy in the form of energy, which has been evaluating every aspect of human activities under the supervision of the international environmental considerations and sustainable development. Dams have also been subjected to this scrutiny and some cases of water pollution have been used to illustrate the use of dams in general. We consider this to be not acceptable, and that these receptors should be treated as such.

On the other hand, we also note that the opportunity of dam operators has been committed to the development and improvement of the national and international conditions. Accordingly, we are eager to take the measure to improve every aspect of a dam's development and to plan to improve every aspect of a dam's development.

The resolution you have in mind will be published quarterly and I hope it will give them quite the same contribution to the world of energy, however far from home and its owner with which water providers like this all have the right to be involved in the high-quality world.

Beyond that, it is worth it to see and get a communication for between the National Commission and the Central Office of the ICOLD as a whole and increase the efficiency in the world of dam operators, who particularly should be the ICOLD members for every good opportunity. For the articles and regulations in the subject of dams in the Three Dams Dam, you can find it in the ICOLD and ICOLD for every dam operator in the world. We are eager about the ICOLD, hoping that the resolution will make possible more such activities, and you a dam operator.

C.B. Venter
