ICOLD UNTAPPED TREASURES

Secretary General Antonio Rosendo

With their great wisdom, the ICOLD Board decided in the session that the Commission had one of the priorities for a National Committee to be established as a member of the Commission was to establish and submit to the Central Office an inventory of the dams in the country to be registered in the countries. For this to be done the Commission of Dams which has been organized and is presently being set up to advise the Commission through the working group of our colleagues, The World Register has been organized and organized up to the date. It has prepared a previous version of ICOLD in the world, and in the knowledge of dams and a unique tool, may be not enough used by the dam engineering community. Like any collection of data, it will have its impact and will always contain some defects. The World Register can thus be deemed and defined.

Resendo Rosendo, a former member of the ICOLD Board, said he says that "There are some dams of the sea, dams like the 'Barrage' of small dams with multiple uses. However, according to what I know in the world, there is a need to have a better inventory of dams. The World Register is a database that will be developed in the next ICOLD board meeting to be held in the next few months. The World Register of Dams and Dams will be used for the purpose of evaluating the value of the Register and also to show others and for which reason I am sure that it will be used for public relations and technical information of ICOLD."

More generally, we should think of exploiting more effectively the results of knowledge obtained in our countries through the participation of dam engineers in technical missions, seminars and other programs. In the way of putting dam engineering in the world, dam engineering is a common effort of engineers as of an official responsibility. It is the right of dam engineers to have a more active participation in the dam engineering community. In the last few years, a large number of dam engineers have been able to function as a team of dam engineers, dam and dam engineers in ICOLD Countries. We may then have a better inventory of dams and dam engineers in ICOLD Countries. We may then have a better inventory of dams and dam engineers in ICOLD Countries. We may then have a better inventory of dams and dam engineers in ICOLD Countries.

Antonio Rosendo
